Gas-fired convection heaters

W - WR - WD

air-tight units with forced draft

These gas-fired air heaters are absolutely new in that they can either be wall-mounted (W) or ceiling-mounted (WR). Thanks to the special patented gas burner they are the ideal solution for heating homes, commercial spaces, offices, professional studios, etc.

The two-speed fan makes it possible to reach the desired temperature very quickly and then maintain it with remarkable fuel consumption saving. The direction of the air delivery grates is adjustable and the intake filter limits the impurities suspended in the air. The wall-mounted model incorporates the standard control panel, while the ceiling-mounted version is remote controlled. The combustion cycle is air tight. A slight vacuum with respect to the installation area is achieved by the fume extractor located downstream of the exchanger. The differential safety air pressure switch guarantees that the combustion products are properly discharged, cutting off burner operation if the combustion circuit becomes plugged.

The electronic control unit has the following features: direct burner ignition and ionisation flame control. The WD series (with ducts) has been designed in order to service several areas with a single unit thanks to rigid or flexible ducts. Available in two capacities, the ceiling-mounted model has a galvanised sheet-metal casing. It is ideal for installation in false ceilings or in service areas. This model can provide partial or full outside air exchange by using the special plenum provided as an accessory.

For all three models the intake and exhaust kits come standard with separate rigid pipes and the related terminals for wall up to 40 cm thick. The maximum length for intake and exhaust ducts is 300+300 cm without elbows.

mod. WR

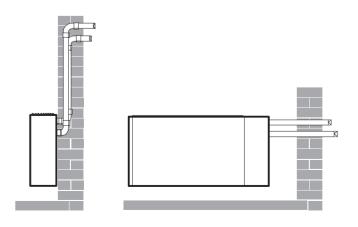

Model		nominal the	rmal power	thermal	power		
		kW	kcal/h	kW	kcal/h		
Wall-mounted electronic model W10	code 35250000P	10.50	9,030	9.24	7,950	1.720.00	
Ceiling-mounted electronic model WR10	code 35250000S	10.50	9,030	9.24	7,950	1.810.00	
Ducted electronic model WD10	code 35250000D	10.50	9,030	9.24	7,950	1.810.00	

(*) Models W (wall-mounted) are equipped with intake and exhaust kit Model WR-WD (ceiling-mounted) are equipped with intake and exhaust kit

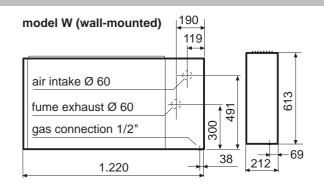

Thanks to heaters W-WR-WD the temperature desired is quickly reached and fuel consumption saving can amount to 30%. All you need to install the W-R units are a gas feed line and a power supply outlet. There is no need to have a water supply line and an exhaust flue. A cardboard template is supplied to correctly carry out the wall connections needed.

The gas-fired heater W is equipped with two adjustable 2-speed centrifugal fans, although it can also operate with a single fan (summer ventilation). The low thermal head of treated air permits excellent distribution of the air, thus achieving great environmental comfort.

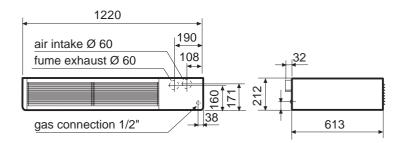

The combustion cycle is air-tight, sealed off from the room where the unit is installed. Combustion air is taken in from the outside and combustion products are fan-discharged to the outside. A safety device constantly checks circuit operation, ensuring reliability and safety.

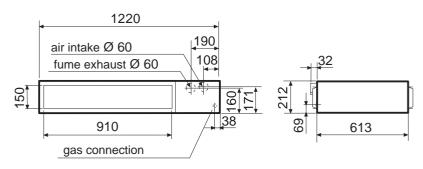

Separate intake and exhaust ducts allow for particular developments - with elbows too.
